
León,Nicaragua - Gringos In Panama

This is the demo version (this is how you know it's the demo) "Here is a link to the original website. " So, you will want to select the.swf based off of that code. This works on version 2.2 and up. Thanks LIMK2 LIM and ezrin/radixin/moesin-binding phosphoprotein 2 also known as LIMK2 is an enzyme that in humans is encoded by the LIMK2 gene. Function Members of the LIM domain-containing protein family are important regulators of actin cytoskeletal dynamics and cell migration. The LIM domain-containing protein (LIM-D) is a cytosolic protein that binds directly to the G-actin-binding protein, filamin, in the cytoskeleton and may play a role in filamin-dependent signaling events. The LIMK2 protein binds to both the actin-binding protein, filamin, and moesin, an actin-binding protein. This protein is likely to be involved in the regulation of actin polymerization in response to growth factor signaling. LIMK2 is a member of a protein kinase superfamily, called the LIMK family, which consists of three closely related members: LIMK1/Lim-kin, LIMK2/Dia2, and LIMK3/Cytk1. Interactions LIMK2 has been shown to interact with: MARK2, NEDD9, Paxillin SMG1, and SMAD3. References Further reading External links/* Copyright (c) 2012 LinkedIn Corp.
